CEO

Certificate cover letter

This 10-month training program is designed to equip learners with practical knowledge and skills through primarily self-directed study, supported by weekly mentor-led workshops. These sessions offer expert guidance and help deepen understanding of key topics. The program fosters peer-to-peer collaboration, effective communication, and the development of self-management, problem-solving, and teamwork skills essential for professional growth.

Study volume: **533** academic hours

Trainers: Meelis Teern, Rain Tüür

Learning outcomes

- Designs and implements robust backend systems using Java and Spring Boot.
- Manages relational databases proficiently using SQL.
- Creates and manages RESTful APIs.
- Writes unit and integration tests to ensure software quality.
- Utilizes Git for version control.
- Utilizes development environments, database migration tools, and containerization platforms.
- Implements security best practices in backend development, including authentication, authorization, and adhering to secure coding guidelines.
- Produces comprehensive documentation for backend systems.
- Efficiently picks up and understands unfamiliar projects, identifies, and resolves bugs, and develops new features.
- Engages effectively in both individual and team-based software development project.

Assessment

- Have passed two Java and Spring Boot Fundamentals exams.
- Have completed at least 80% of assignments.
- Have attended at least 75% of workshops.
- Have submitted at least 80% of feedback reports.
- Have passed the graduation project.
